President's Message

For over 50 years, Nye Lubricants has been dedicated to OEM design engineers, providing lubricants as critical components in product design to help ensure long life and best performance. Manufacturing of high-quality oils and greases is only the beginning. We focus closely on our customers' applications, fine tuning development, formulation, testing and processing to meet specific customer needs in very challenging environments. Our leading products form an enabling technology for the design engineer. I am pleased to introduce our December 2016 issue of the Nye Lubeletter, now finishing its 44th year.

This issue reprints recent articles illustrating our success in providing lubricants as engineered components for our customers. I invite you to contact us with your engineering design challenges.

George Mock, III
President/CEO

Industry Focus

Our case studies will give you an inside look at Nye success stories in the Automotive, Semiconductor, and Medical Industries. Learn more about how we help solve some of our customers' most difficult challenges throughout their development and design processes.

Technology

In the last six years our technical teams have bridged a gap between R&D and Product Development to advance our component testing, simulation testing and applied mechanics. The articles in the Technology section feature some of our testing capabilities both in the ADVT lab and our R&D lab.

Product Insight

The year 2016 saw the improvement of several established grease series, the introduction of sample kits and the release of new lubricant formulations. Learn more about our Connector Kit available for sampling, Nye's first calcium sulfonate thickened product, and the next generation of synthetic hydrocarbon greases thickened with lithium soap.

Video Production

This year we launched our NyeTube channel making all videos accessible on our social media pages and corporate website. NyeTube features educational videos that describe Nye's custom solutions, quality in manufacturing and lubricant testing capabilities.
