## President's Message

For over 50 years, Nye Lubricants has been dedicated to OEM design engineers, providing lubricants as critical components in product design to help ensure long life and best performance. Manufacturing of high-quality oils and greases is only the beginning. We focus closely on our customers' applications, fine-tuning development, formulation, testing and processing to meet specific customer needs in very challenging environments. Our products form an enabling technology for the design engineer.

This issue of the LubeLetter illustrates our dedication to this technology, introducing you to our company with our new corporate video, describing our extensive capability in tribology (the study of friction and wear), to our deep focus and research on the technical challenges of our focus markets. I invite you to contact us with your engineering design challenges.

### George Mock, III President/CEO

### Corporate Video: An Inside Look at Nye

Nye Lubricants is proud to release our Corporate Video. Through employee interviews, we demonstrate how the Nye team is dedicated to enabling and improving breakthrough products that help our customers solve their toughest design challenges. Get an inside look at how our lab innovations, broad product lines, and dedicated manufacturing areas set us apart!

### **Bridging the Gap in Tribology with Technology**

The Applied Science and Tribology Lab (ASTL) at Nye Lubricants was developed to bridge the expertise in our R&D group, where new lubricants are formulated, and the Application Development and Validation Testing (ADVT) lab, where application simulation and pre-validation test development is the focus. Learn more about our new testing capabilities.
