ISO 13485 Certification

Fairhaven, MA, June 22, 2015

Nye Lubricants, Inc. is proud to announce the achievement of ISO 13485 Certification, demonstrating our commitment to the success of our medical industry customers.

This certification will guide the design, development and production process of Nye's carefully engineered and customized lubricants, which are available in fluid, dispersion, or grease form and utilize a wide array of formulation chemistries. Damping gels or greases are particularly important in the medical market. These are specifically offered for motion, noise and haptic control in sensitive medical equipment and devices, including those designed for the parenteral delivery of drugs. Nye works closely with device design firms, contract manufacturers, and drug marketers to create products which help optimize performance, quality and cost, as well as patient compliance and safety.

Chris Andreola, Nye's Senior Product & Innovation Manager for this market segment, stated: "Medical device developers appreciate suppliers that support the quality and regulatory requirements necessary for product registration. And ISO standards are becoming more important globally. This achievement is another milestone on our journey to enhance our capabilities while reducing risk for our valued customers."

Nye celebrates this opportunity to broaden its involvement in the technically demanding global Medical market, and is one of the few lubricant companies to achieve this certification.

"Quality and regulatory compliance issues can influence device development strategy," Chris concludes. "While our business development efforts are highly coordinated with our new technology and product development, our awareness of the global regulatory climate makes Nye the preferred partner for medical device companies."

Nye Lubricants, Inc. is a privately held formulator and manufacturer of high-quality synthetic oils, greases, specialty fluids, and index-matching optical gels. Founded in 1844, Nye services customers in a

broad range of industries including the top 25 global automotive parts suppliers, the world's largest aerospace and defense contractors, name-brand appliance and power tool companies, preeminent medical device manufacturers, and several leading in-vacuum equipment producers. With 170 employees and 28 International Channel Partners on six continents, Nye is in business to redefine superior product performance, leveraging its technology, engineering expertise, and core competencies in synthetic lubricants to its customers' enduring benefit.
